LCA3 UI vs UX

* INTRODUCTION:

UI and UX are two important aspects of designing digital products such as websites, mobile applications, and software. Although they are closely related, they serve different purposes. UI focuses on the visual and interactive elements of a product, while UX focuses on the overall experience a user while using it.

* UI:

UI refers to the visual elements through which users interact with a digital product. It focuses on the appearance, layout and presentation. Key elements include:

- Colours, typography and icons
- Buttons, menus and navigation bars
- Layout, spacing and alignment

Eg: In a shopping application, the colour of the buttons, product images, font styles, and placement of the Add to Cart button are all part of UI design.

* UX:

Refers to the overall experience and satisfaction a user gets while interacting with a product. Key elements:

- Ease of use, navigation
- Accessability and usability
- Efficient task completion
- User satisfaction and problem solving

Eg: In the same shopping application, how easily a user can search for products, compare prices, add items to cart and make purchases

* Differentiate Between UI and UX

User Interface (UI)	User Experience (UX)
• focuses on appearance	• focuses on overall exp
• concerned with visual design	• concerned with usability/ functionality
• includes colours, buttons, etc	• includes navigation, accessibility and user satisfac-
• makes product visually appealing	• makes a product useful and easy to use

* CONCLUSION:

UI and UX are equally important in modern digital design.

A successful ~~des~~ product combines effective UI and UX design to provide a seamless and satisfying experience for its users
